### Sažetak izvora

Obalna crta se ucrtava na službenim pomorskim kartama kao razdjelnica između kopna i mora. U Hrvatskom hidrografskom institutu definirana je (Domijan i dr., 2005.) kao sjecište plohe kopna i plohe geoida koji je određen srednjom razinom visokih voda na mareografima u Kopru, Rovinju, Bakru, Splitu i Dubrovniku za epohu 1971.5. Definicija je sukladna odluci Međunarodne hidrografske organizacije (IHO) za određivanje obalne crte.
